

# Experience Assignment 1

---

Author: 577136@stud.hvl.no

## Tasks

- Installation: Software Development Environment
  - JRE
  - IDE
  - Maven
  - Git
- Experiment: Heroku and Platform as a Service

Noting on following topics:

- technical problems that you encountered during installation of the software development environment and how you have solved them
- how you have validated (checked) that the software development environment is working
- technical problems encountered with the Heroku platform and how you solved them
- any pending issues with this assignment which you did not manage to solve

## Installation

### Java RE

Since I've already had several classes with programming in Java, I already had a setup of Java running.

Verified Java installation with the following command.

```
$ java --version
java 13.0.2 2020-01-14
Java(TM) SE Runtime Environment (build 13.0.2+8)
Java HotSpot(TM) 64-Bit Server VM (build 13.0.2+8, mixed mode, sharing)
```

### Maven

This tool is already installed. Can be fetched with using [Homebrew](#);

```
$ brew install maven
```

Verifying the Maven setup:

```
$ mvn -v
Apache Maven 3.6.3 (cecedd343002696d0abb50b32b541b8a6ba2883f)
Maven home: /usr/local/Cellar/maven/3.6.3_1/libexec
Java version: 14.0.1, vendor: N/A, runtime:
/usr/local/Cellar/openjdk/14.0.1/libexec/openjdk.jdk/Contents/Home
Default locale: en_N0, platform encoding: UTF-8
OS name: "mac os x", version: "10.15.6", arch: "x86_64", family: "mac"
```

## IDE

I have a collection of IDE's installed. I can, usually deciding after the size of the project, choose between the following IDE's that is installed: Visual Studio Code, Eclipse or IntelliJ.

Verified the IDE with creating a Maven project in IntelliJ. Wrote a HelloWorld.java program and compiled and ran it. Received the "java: error: release version 5 not supported" error when running the Maven project. Turns out I had forgotten to change the setting for the compiler for the project from 1.5 -> 13. Changing this, and the program compiled and worked perfectly. Google Result for a similar problem on [StackOverflow](#)

Output from IntelliJ:

```
/Library/Java/JavaVirtualMachines/jdk-13.0.2.jdk/Contents/Home/bin/java
-javaagent:/Applications/IntelliJ
IDEA.app/Contents/lib/idea_rt.jar=62253:/Applications/IntelliJ
IDEA.app/Contents/bin
-Dfile.encoding=UTF-8
-classpath /Users/kenneth/GIT/java.test/target/classes
helloworld.HelloWorld

Hello world

Process finished with exit code 0
```

## Git

Already installed Git CLI tools as I use them for private projects. Also use [GitKraken](#) as my GUI client for managing my repositories.

```
$ git version
git version 2.22.0
$ git init dat250.h20
Initialized empty Git repository in /Users/kenneth/dat250.h20/.git/
```

## Experiment: Heroku and Platform as a Service

---

Following the [guide](#) suggested from the assignment.

## Heroku CLI

Installed via brew:

```
brew install heroku/brew/heroku
```

Logged in:

```
kenneth@kefo ~ > heroku login
heroku: Press any key to open up the browser to login or q to exit:
Opening browser to https://cli-auth.heroku.com/auth/cli/browser/{token}?
requestor={id}
Logging in... done
Logged in as fossen.kenneth@gmail.com
```

Followed the guide. Skipped the step of adding Papertail to the account as it required a "Verification" based on me adding my Credit Card. Solved by skipping the task, as I'm not adding my card to a Online Service.

```
$ heroku addons:create papertrail
Creating papertrail on damp-reaches-93136... !
  ▶ Please verify your account to install this add-on plan (please enter
a credit card)
  ▶ For more information, see
https://devcenter.heroku.com/categories/billing Verify now
  ▶ at https://heroku.com/verify
```

Except this there was no issues running/configuring or using Heroku services from my DevEnv.

```
$ heroku scale web=1
Scaling dynos... done, now running web at 1:Free
kenneth@kefo ~/GIT/heroku/java-getting-started ~ master ~ heroku ps
Free dyno hours quota remaining this month: 550h 0m (100%)
Free dyno usage for this app: 0h 0m (0%)
For more information on dyno sleeping and how to upgrade, see:
https://devcenter.heroku.com/articles/dyno-sleeping

=== web (Free): java -jar target/java-getting-started-1.0.jar (1)
